

# The Power of Pedigree Patterns

Horse breeders are all up against the same challenge: genetics. This book explains how you get the cutting edge statistical advantage in breeding and selecting prospects. The mystery of Federico Tesio's successful strategy is finally explained. It is as simple as it is beautiful. Are you ready to take your breeding program to the next level or select consistently the most promising prospects?

A new perspective on natural selection is discussed and how diversity within a herd can benefit the whole group. This book presents in an easy, understandable and short way how smart nature works.

Dr. Chantal Spleiss' passion for pedigrees started in 1998 and she has become a leader in pedigree evaluation. She uniquely combines her scientific background with the experience she gains from being a Quarter Horse breeder. In 2014 she founded the database for equine genetics "allbredGENETICS" and in 2017 the pedigree platform "MagicMatchGenetics". In her first book she presents a new theory to answer old questions and explains why pedigree patterns are the key to successful performers.
